1. Performance			
Server software		litespeed webserver	litespeed webserver
Uptime Guarantee (99.9%+ preferred)	what is the actual guarantee cover, and what is the compensation?	cuma 5%, proses pengembalian bakal susah ⭐	NA
Server Speed (Response time, latency)	depends on location, hardware, software stack	?	?
Bandwidth (Unmetered vs. limited)	high bandwidth = more data /second, usually useful for sites with big downloads. To handle a lot of concurrent requests, server processing power (dependent on RAM, CPU) is more important. The amount of data that can be transferred to and from your server over a period (measured in Mbps or Gbps). It affects website speed and traffic handling.	?	?
CDN Integration (Cloudflare, Akamai)	CDNs typically cache and minify the following file types: Cached Files (Static Content) 1. Images – JPG, PNG, GIF, SVG, WebP 2. CSS & JavaScript – Stylesheets, scripts 3. Fonts – WOFF, WOFF2, TTF, EOT 4. Static HTML – Cached versions of pages to reduce server load 5. Videos & PDFs (depending on CDN settings) Minified Files (text based files) 1. CSS – Stylesheets (.css) 2. JavaScript – Scripts (.js) 3. HTML – Web pages (.html)	https://www.hostinger.com/blog/hostinger-cdn-out-of-beta⭐	NA
Data Center Locations (Proximity to target users)		Indo	Indo
2. Resources & Scalability			
Storage Type & Limit (SSD vs. HDD, NVMe)	NVMe SSDs result in faster website loading, improved database performance, and better overall server responsiveness.	NVME 200 gb, 600k INODES⭐	unlimited SSD NVME,250k INODES
RAM Allocation	more RAM allows for more caching, for faster load times and reduces server strain resulting in generally faster processing . at least 2GB for small stores.	1.5gb ⭐	1 gb guaranteed, 2 gb max
CPU Cores & Power		2 cores⭐	1.5 core max, 50% guarantee
I/O capacity	**I/O Capacity** – The speed at which data is read from or written to storage (measured in MB/s). It impacts database performance, file transfers, and disk-heavy operations.	20 MB/s	probably similar
Scalability Options (Easy upgrade/downgrade)		?	?
Traffic Handling Capacity (Concurrent connections)	for ecommerce cases, the bottleneck is usually database concurrent connection limit, web server limit, and slow I/O.	60 php workers, 20 entry processes ⭐	20 entry processes, 40 nproc
Add on Domains			100 unlimited
Database size		3gb per db, max 300 database ‼️	
3. Security & Reliability			
SSL Certificate (Included or add-on)		Y	Y
DDoS Protection	comes with CDN integration	Y ⭐ , cloudflare nameserver	Y
Malware Scanning & Removal		Y	Y
Automated Backups & Restore (Frequency, retention)	have to look into any backup size limit.	3rd party tools can get around this. 30gb max backup size⭐ ?	5gb max backup size
Firewalls & Security Patches		Y	Y
Data Redundancy & Failover Protection	data redundancy refers to having multiple copies of data in different disks or locations on the disk. this guards against accidental deletion, corruption, or disk / server failure. failover protection (recovery) means a contingency plan exists for server failure. A passive one can be redirecting traffic using a load balancer to a healthy server.	backup harian, mingguan, easy restoration using backup⭐	backup mingguan, restoration help in the case of hacking
4. Support & Customer Service			
24/7 Customer Support (Live chat, phone, email)		Y	Y
Support Response Time		?	very good ⭐
5. Features & Software			
Custom Cron Jobs & SSH Access		400 max	Y
Caching Integration	https://www.hostinger.com/tutorials/what-is-object-cache#WordPress_Object_Cache	support redis except on vps plans. https://support.hostinger.com/en/articles/9581774-is-	litespeed cache with litespeed server. redis supported. wp accelerator(paid plugin) ⭐
6. Pricing & Contract Terms			
Monthly vs. Annual Pricing (Discounts for longer terms)		48 bulan lockin @ 25rb, 24 @ 30rb, 12 @40rb, 1 @ 110rb per bulan ⭐	100k / bulan
Renewal Rates (Potential price hikes)		48 bulan lockin @ 50rb, 24 @ 60rb, 12 @85b	NA
Hidden Fees (Setup, migrations, overages)	Hidden costs in hosting packages often include: 1. Renewal Price Hikes – Introductory rates are low, but renewals can be much higher. 2. Resource Overages – Exceeding bandwidth, storage, or CPU limits may trigger extra charges. 3. SSL Certificates – Some hosts charge for SSL after an initial free period. 4. Backup & Restore Fees – Automatic backups might cost extra, and restores can have fees. 5. Migration Costs – Transferring your site from another host may not be free.	domain @150k for 2nd year on	

6. Email Hosting – Some providers charge separately for business email accounts.

7. Add-ons & Security Features – Malware protection, dedicated IPs, or premium support may cost extra.

8. Domain Fees – Free domains may only last a year, with expensive renewals.

Always check the terms of service to avoid unexpected costs.

115k for .com, 219k for .id domain

7. Additional Benefits			
Free Domain & Email Accounts	nice to have👍	Y, domain first year	Y, domain first year
			premium wp plugins / themes🌟 Lisensi hanya berlaku untuk domain utama akun hosting yang terdaftar di Clientzone. php xray
Website Builder Tools	nice to have👍	free wp themes	
Migration Assistance	nice to have👍	yes, free migration	yes, free migration
Staging Environments (For testing)	nice to have👍 we can always create this manually	yes	yes
3rd party integrations		git, ssh	git, ssh
email		mailboxes	200email/jam, max 50 recipient / email ⭐
